

Cavern Diving Tours 2024

Guided cavern dives in the local cenotes are available for all certified divers to be safely enjoyed. Cenotes are freshwater pools in the jungle that connect to the vast underground cave systems. These pools are the entryway to underwater marvels with visibility well in excess of 45 meters/150 feet, stalactites and stalagmites of every shape and size, and light zones that will dazzle your eyes.

Cavern dives are guided safely by our professional guides within the light zone and guided cavern standards accepted worldwide. Our cavern guides carry minimum certifications of full cave diver and dive master by a recognized training agency. Often they are cavern or cave diving instructors with hundreds or thousands of dives in the local environment. Maximum allowed ratio of divers to guide is four to one.
